

PF ASSIGNMENT

NAME:AMNA KHAN

CLASS:BSE-1C

ROLL NO:26K-3091

QUESTION:01

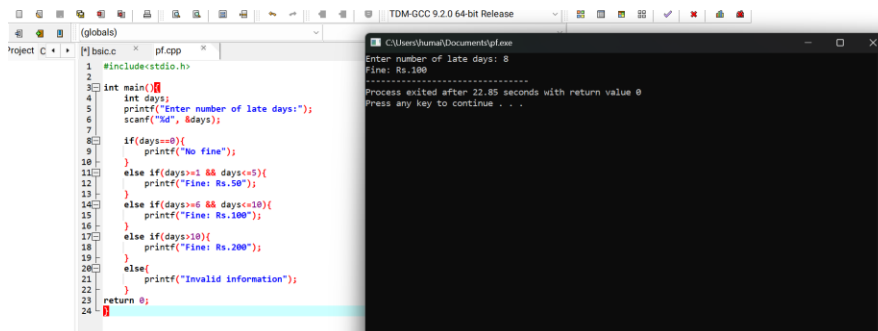

```
1 #include<stdio.h>
2
3 int main(){
4     float marks;
5     float income;
6     printf("Enter your marks(percentage):");
7     scanf("%f", &marks);
8     printf("Enter your family income(Rs.):");
9     scanf("%f", &income);
10
11     if(marks>=80 || income>50000){
12         printf("You qualify for the scholarship!");
13     }
14     else{
15         printf("You doesn't qualify for the scholarship!");
16     }
17     return 0;
18 }
```

Execution Output:

```
Enter your marks(percentage): 60
Enter your Family income(Rs.): 80500
You qualify for the scholarship!
.....
Process exited after 23.24 seconds with return value 0
Press any key to continue . . .
```

QUESTION:02

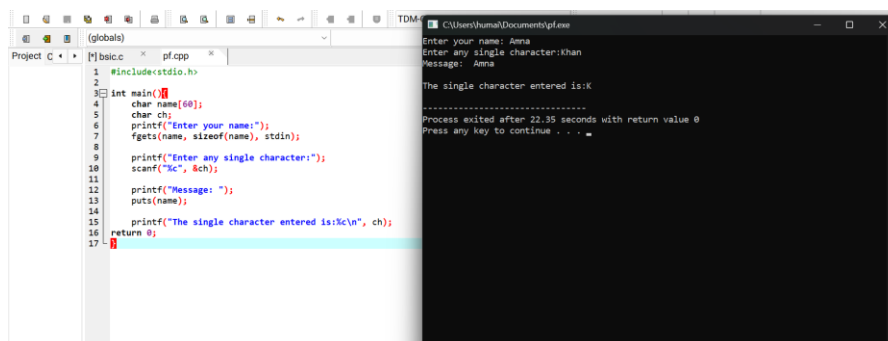

```
1 #include<stdio.h>
2
3 int main(){
4     int days;
5     printf("Enter number of late days:");
6     scanf("%d", &days);
7
8     if(days==0){
9         printf("No fine");
10    }
11    else if(days>=1 && days<=5){
12        printf("Fine: Rs.50");
13    }
14    else if(days>=6 && days<=10){
15        printf("Fine: Rs.100");
16    }
17    else if(days>=10){
18        printf("Fine: Rs.200");
19    }
20    else{
21        printf("Invalid information");
22    }
23    return 0;
24 }
```

Execution Output:

```
Enter number of late days: 8
Fine: Rs.100
.....
Process exited after 22.85 seconds with return value 0
Press any key to continue . . .
```

QUESTION:03

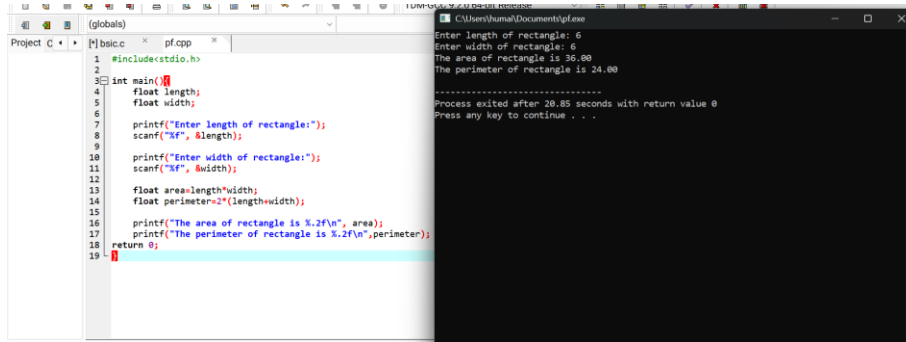

```
1 #include<stdio.h>
2
3 int main(){
4     char name[60];
5     char ch;
6     printf("Enter your name:");
7     fgets(name, sizeof(name), stdin);
8
9     printf("Enter any single character:");
10    scanf("%c", &ch);
11
12    printf("Message: ");
13    puts(name);
14
15    printf("The single character entered is:%c\n", ch);
16    return 0;
17 }
```

Execution Output:

```
Enter your name: Anna
Enter any single character:Khan
Message: Anna
.....
The single character entered is:K
.....
Process exited after 22.35 seconds with return value 0
Press any key to continue . . .
```

QUESTION:04

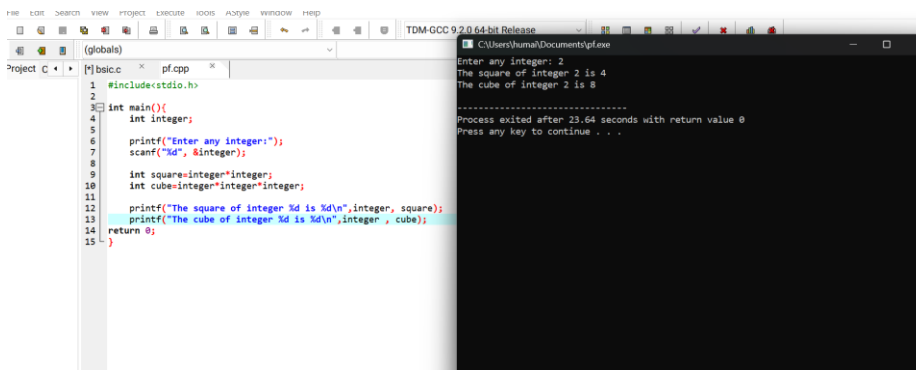

```
1 #include<stdio.h>
2
3 int main()
4 {
5     float length;
6     float width;
7
8     printf("Enter length of rectangle:");
9     scanf("%f", &length);
10
11     printf("Enter width of rectangle:");
12     scanf("%f", &width);
13
14     float area=length*width;
15     float perimeter=2*(length+width);
16
17     printf("The area of rectangle is %.2f\n", area);
18     printf("The perimeter of rectangle is %.2f\n", perimeter);
19     return 0;
20 }
```

Output:

```
Enter length of rectangle: 6
Enter width of rectangle: 6
The area of rectangle is 36.00
The perimeter of rectangle is 24.00
.....
Process exited after 20.85 seconds with return value 0
Press any key to continue . . .
```

QUESTION:05

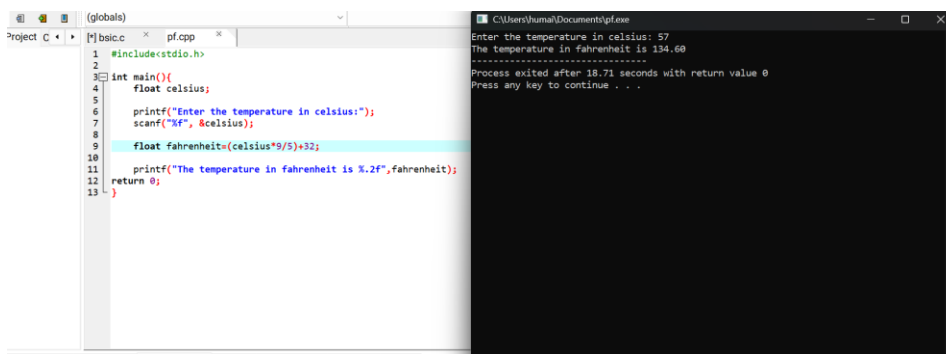

```
1 #include<stdio.h>
2
3 int main()
4 {
5     int integer;
6
7     printf("Enter any integer:");
8     scanf("%d", &integer);
9
10    int square=integer*integer;
11    int cube=integer*integer*integer;
12
13    printf("The square of integer %d is %d\n", integer, square);
14    printf("The cube of integer %d is %d\n", integer, cube);
15    return 0;
16 }
```

Output:

```
Enter any integer: 2
The square of integer 2 is 4
The cube of integer 2 is 8
.....
Process exited after 23.64 seconds with return value 0
Press any key to continue . . .
```

QUESTION:06

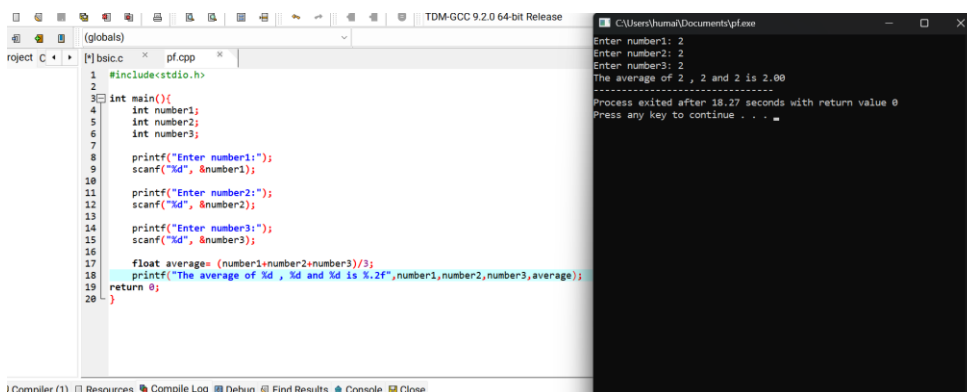

```
1 #include<stdio.h>
2
3 int main()
4 {
5     float celsius;
6
7     printf("Enter the temperature in celsius:");
8     scanf("%f", &celsius);
9
10    float fahrenheit=(celsius*9/5)+32;
11
12    printf("The temperature in fahrenheit is %.2f", fahrenheit);
13    return 0;
14 }
```

Output:

```
Enter the temperature in celsius: 57
The temperature in fahrenheit is 134.60
.....
Process exited after 18.71 seconds with return value 0
Press any key to continue . . .
```

QUESTION:07

```
1 #include<stdio.h>
2
3 int main()
4 {
5     int number1;
6     int number2;
7     int number3;
8
9     printf("Enter number1:");
10    scanf("%d", &number1);
11
12    printf("Enter number2:");
13    scanf("%d", &number2);
14
15    printf("Enter number3:");
16    scanf("%d", &number3);
17
18    float average= (number1+number2+number3)/3;
19    printf("The average of %d , %d and %d is %.2f", number1, number2, number3, average);
20    return 0;
21 }
```

Output:

```
Enter number1: 2
Enter number2: 2
Enter number3: 2
The average of 2 , 2 and 2 is 2.00
.....
Process exited after 18.27 seconds with return value 0
Press any key to continue . . .
```

QUESTION:08
